REVIEWER INDEX

to Volume 115, January–April, 1987

Below is a list of the people who reviewed manuscripts for GENETICS during the preparation of Volume 115.

The aim of GENETICS is to communicate significant research. To succeed, we must recognize what is significant; we must make sure the presentation is accurate, unambiguous and yet readable. For this, we depend heavily on our reviewers, who perform this indispensable service without reward. The quality of the journal can be no better than the quality of their efforts. We apologize to any reviewer whose name has been inadvertently omitted, and we are sincerely grateful to all.

Abrahamson, S.
Akin, E.
Arnold, J.
Arst, H. N.

SUBJECT INDEX

to Volume 115, January–April 1987

Agouti, coat color locus, molecular markers, 747
Alcohol dehydrogenase
  functional mutants, allyl alcohol resistance, *Saccharomyces cerevisiae*, 65
  post-translational control, *Drosophilia melanogaster*, 693
  recombination, *In(2L)t* and *α-Gpdh*, *Drosophilia melanogaster*, 141
Aldehyde oxidase, regulation, *cis-* and *trans*-acting control elements, *Drosophilia*, 283
Allele
  Ddc, dopa decarboxylase *gynandromorphs*, *Drosophilia melanogaster*, 305
  gain-of-function mutations, *fem-3*, *Caenorhabditis elegans*, 107
  kappa, killer trait, *Paramecium aurelia*, 197
  rare, gene flow, *Drosophilia melanogaster*, 313
Allosuppressors, enhanced efficiency, omnipotent suppressors, yeast, 451
Allozyme, linkage disequilibrium, natural populations, lodgepole pine, 341
Amino acids, MMS sensitivity, suppressors, *Aspergillus nidulans*, 671
Amoeba, diploidy, genus *Naegleria*, 265
Androgen, binding protein, chromosome 7, mouse, 535
Arbutin, cellobiose utilization, cryptic gene system, *Escherichia coli* K12, 419
Ascomycetes, filamentous, mating-type switching, *Chromocrea spinulosa* and others, 215
Aspergillus nidulans, MMS sensitivity, suppressors, mutations in single gene, 671
Australia, P-M hybrid dysgenesis cline, *Drosophilia melanogaster*, 737

Bacteriophage *lambda*
  cII gene, efficiency of translation, mRNA, 585
  cII-like proteins, cross-specificities, p_{RE}-like promoters, 597
  DNA maturation inhibition, *trans*-acting inhibitor, 3
  inversions, *Escherichia coli*, homologous recombination, 11
  p_{RE} promoter, mutations, coliphage λ, 591
Bacteriophage T4
  amino-terminal domain, DNA polymerase, genetic mapping, 393
  repair of DNA damage, new epistasis group, 405
  suppression, *uvsW* mutations, 219
Behavior, reproductive, *cacophony* courtship song, *Drosophilia melanogaster*, 461

Caenorhabditis elegans, gain-of-function mutations, *fem-3*, 107
Catecholamines, Ddc^{del} mutant, dopa decarboxylase expression, Drosophilia, 477
Cellobiose
  utilization
    cryptic genes, *Escherichia coli* natural isolates, 431
    cryptic gene system, *Escherichia coli* K12, 419
Chi sites, homologous recombination, *Escherichia coli*, phage λ inversions, 11
Chlamydomonas reinhardtii, 677, 685
Chloroplast
  disequilibrium statistics, definition and properties, nuclear and cytoplasmic genotypes, 755
  uniparental transmission, mating type linked mutations, *Chlamydomonas reinhardtii* , 677
Chromocrea spinulosa, mating-type switching, filamentous ascomycetes, 215
Chromosome 7, androgen-binding protein, mouse, 535
Chromosome 9, *mutator*-induced deletions, maize, 353
Chromosome B, control of meiotic drive, mealybug, 499
Chromosomes, alcohol dehydrogenase, post-translational control, *Drosophilia melanogaster*, 693
Chromosome *X*
  cytogenetics, *Notch* mutations, *Drosophilia melanogaster*, 701
  gene expression, *Gpd* and *Pgk-A* loci, opossum, 185
  Ring-, dopa decarboxylase gene, *Drosophilia melanogaster*, 305
Chromosome *Y*
  polymorphism, natural selection, 569
  segregation, natural populations, *Drosophilia melanogaster*, 143
cII
  cross-specificities, p_{RE}-like promoters, lambdoid bacteriophages, 597
  mutations, p_{RE} promoter, coliphage lambda, 591
cos, DNA maturation, *trans*-acting inhibitor, phage λ, 3
Cryptic genes
  cellobiose utilization
    Escherichia coli K12, 419
    natural isolates, *Escherichia coli*, 431
Cytochrome *c*, *PET111* nuclear gene, translation of mitochondrial mRNA, yeast, 637
Cytotype, *P*, hybrid dysgenesis, *Drosophilia melanogaster*, 121

Daphnia, consequences, fluctuating selection, isozyme polymorphisms, 657
Deletion
  chromosome 9, *mutator*-induced mutations, maize, 353

local DNA sequence control, *Escherichia coli*, plasmid pBR322, 41
Dictyostelium discoideum, recessive lethals, 101
Diepoxybutane, induced mutations, *rosy* locus, *Drosophilia melanogaster*, 323
Diploidy, first evidence, amoeba, genus *Naegleria*, 265
Dirichlet model, multinomial, use for analysis, subdivided genetic populations, 363
Disequilibrium
definition and properties, statistics, nuclear and cytoplasmic genotypes, 755
linkage, allozymes, lodgepole pine, 341
natural selection, varied environments, *Drosophilia melanogaster*, 295
DNA
cloned genes, fine structure analysis, yeast transformation, 73
hypervariable Bkm loci, restriction fragment length polymorphism, moth, 493
immunoglobulin variable genes, somatic mutations, mouse, 169
repair, two different pathways, *Saccharomyces cerevisiae*, 83
replication repair, new epistasis group, bacteriophage T4, 405
satellite and simple-sequence, persistence, tandem arrays, 553
sequence control of deletion formation, *Escherichia coli*, plasmid pBR322, 41
topoisomerase, "iliegitimate" recombination, perspective, 581
trans-acting inhibitor, prohead mutants, phage λ, 3
DNA polymerase, genetic mapping, amino-terminal domain, bacteriophage T4, 393
Dopa decarboxylase
autosomal, *Ddc* mosaics, *Drosophilia melanogaster*, 305
expression in Drosophilia mutant, stage and tissue specificity, 477
Drosophilia pimulans, 277, 283
Drosophilia melanogaster, 121, 129, 141, 143, 153, 271, 277, 278, 295, 305, 313, 323, 333, 461, 477, 693, 711, 725, 737
dunce, females of *Drosophilia melanogaster*, sexual hyperactivity, reduced longevity, 153
Dysgenesis
hybrid
discrete P/Q/M regions, *Drosophilia melanogaster*, 737
inheritance of *P* cytotype, *Drosophilia melanogaster*, 121

Environment
fluctuating, optimal recombination rate, 377
spatially varied, disequilibrium, *Drosophilia melanogaster*, 295
Enzyme
NADP-malic enzyme distribution, regulation, *Drosophilia melanogaster*, 277
regulation of aldehyde oxidase, *cis*- and *trans*-acting control elements, *Drosophilia*, 283
Ephestia kuehniella, hypervariable Bkm DNA loci, restriction fragment length polymorphism, 493
Escherichia coli, 11, 25, 33, 41, 51, 431, 419, 605, 619
Evolution
cryptic genes, cellobiose utilization, *Escherichia coli*, 431
molecular, *P*-element transformation of *Adh*, *Drosophilia melanogaster*, 129
regulatory and structural genes, lysozymes, mouse, 521
simulation, gene duplication, 207
under fertility and viability selection, 367

fem-3, gain-of-function mutations, *Caenorhabditis elegans*, 107
Fitness
fertility and viability selection, evolution, 367
metabolic flux, *Escherichia coli*, 25
Flagella, short, mutants, *Chlamydomonas reinhardtii*, 685
Flux, metabolic, fitness and, *Escherichia coli*, 25
Franklin, Naomi, "illegitimate" recombination, perspective, 581

Gene
chloroplast, uniparental transmission, *Chlamydomonas reinhardtii*, 677
conversion
α-haplotypes, mouse, 511
homology requirement, mammalian cells, 161
cryptic: *see* Cryptic genes
duplication, simulating evolution, 207
flow, rare alleles, *Drosophilia melanogaster*, 313
immunoglobulin variable, somatic mutations, mouse, 169
PET111, translation, mitochondrial mRNA, 637
PRB1, isolation and regulation, yeast, 255
regulation, *P*-element transformation of *Adh*, *Drosophilia melanogaster*, 129
regulatory, cloning, yeast *LEU3*, 91
ribosomal, *Rex* locus, *Drosophilia melanogaster*, 271
STE16, requirement for pheromone production, yeast, 441
trans-activation, Ty transcription, yeast, 649
X-linked expression, *Gpd* and *Pgk-A* loci, opossum, 185
Genetics
commentary, Sewall Wright, 1
multilocus, linkage disequilibrium, lodgepole pine, 341
seventy years ago, H.S. Jennings, inbreeding theory, 389
Genotype
multinomial Dirichlet model, use of analysis, subdivided genetic populations, 363

nuclear and cytoplasmic, disequilibrium statistics, definition and properties, 755
α-Globin, mouse haplotypes, polymorphism, gene conversion, 511
Glomerella cingulata, mating-type switching, filamentous ascomycetes, 215
Glucose
invertase synthesis, *snf* mutations, yeast, 247
protease B gene, isolation and regulation, *Saccharomyces cerevisiae*, 255
Glucose-6-phosphate dehydrogenase, *Pgk-A* locus and, *X*-linked gene expression, opossum, 185
β-Glucosides
cellobiose utilization
cryptic genes, *Escherichia coli* natural isolates, 431
cryptic gene system, *Escherichia coli* K12, 419
α-Gpdh, *In(2L)t* and *Adh*, recombination, *Drosophila melanogaster*, 141

Heat shock gene, regulatory mutation, *Drosophila melanogaster*, 333
Heterochromatin, responding site, *Rex* locus, *Drosophila melanogaster*, 271
Homology, requirement, gene conversion, mammalian cells, 161
Homothallism, mating-type switching, filamentous ascomycetes, *Chromocrea spinulosa* and others, 215
Hybridization, regulatory and structural genes, lysozymes, mouse, 521

Immunoglobulin genes, variability, somatic mutations, mouse, 169
Inbreeding, theory of H. S. Jennings, genetics, seventy years ago, 389
In(2L)t, *α-Gpdh* and *Adh*, recombination, *Drosophila melanogaster*, 141
Insertion sequence
IS*21*, mode of replicon fusion, *Escherichia coli*, 619
natural isolate, *Escherichia coli*, 51
Intestine, regulatory and structural genes, lysozymes, mouse, 521
Inversion, *In(2L)t*, *α-Gpdh* and *Adh*, *Drosophila melanogaster*, 141
Invertase, regulation, *snf* mutations, yeast, 247

Jennings, H.S., inbreeding theory, genetics, seventy years ago, 389

Killer trait, factors determining frequency, *Paramecium aurelia*, 197

Lactate dehydrogenase-A, processed pseudogenes, spontaneous mutations, mouse, 177
lacY, metabolic flux and fitness, *Escherichia coli*, 25
Lambdoid phages, cross-specificities, p_{RE}-like promoters, 597
LEU2, ectopic meiotic conversion, dispersed homologous sequences, *Saccharomyces cerevisiae*, 233
LEU3, cloning, yeast, 91
Longevity, reduced, sexual hyperactivity, *dunce* females of *Drosophilia melanogaster*, 153
Lysozymes, regulatory and structural genes, mouse, 521

Maize, short arm of chromosome 9, *mutator*-induced mutations, 353
Malic enzyme, *cis*- and *trans*-regulation, *Drosophilia melanogaster* hybrids, 277
Mammalian cells, homology requirement, gene conversion, duplicated chromosomal sequences, 161
Mapping
Agouti coat color locus, molecular markers, 747
high-frequency-of-recombination donors, *Pseudomonas aeruginosa*, 611
Marsupials, *X*-linked gene expression, *Gpd* and *Pgk-A* loci, opossum, 185
Mating type
disequilibrium statistics, definition and properties, nuclear and cytoplasmic genotypes, 755
mutations, transmission of chloroplast genes, *Chlamydomonas reinhardtii*, 677
pheromone production, *STE16* gene requirement, yeast, 441
Mealybug, control of meiotic drive, B chromosomes, 499
Meiotic drive
control, B chromosomes, mealybug, 499
Y chromosome segregation, natural populations, *Drosophilia melanogaster*, 143
Methyl methanesulfonate, sensitivity, amino acid-requiring mutants, *Aspergillus nidulans*, 671
Mismatch repair, base composition, nucleotide sequence, *Escherichia coli*, 605
Mitochondria
disequilibrium statistics, definition and properties, nuclear and cytoplasmic genotypes, 755
mRNA, translation, *PET111* nuclear gene in yeast, 637
Mitosis, cell marker system, early embryonic development, *Drosophilia melanogaster*, 725
MMS: *see* Methyl methanesulfonate
Mobile element, genetic transformation, *Drosophilia melanogaster*, 711
Mosaics
autosomal dopa decarboxylase gene, unstable *Ring-X* chromosome, *Drosophilia melanogaster*, 305
cell marker system, early embryonic development, *Drosophilia melanogaster*, 725
Mouse
androgen-binding protein, chromosome 7, 535
α-globin haplotypes, polymorphism, gene conversion, 511
lactate dehydrogenase-A pseudogenes, spontaneous mutations, 177

lysozymes, regulatory and structural genes, 521
somatic mutations, immunoglobulin variable genes, 169
Mutagenesis
amino-terminal domain, DNA polymerase, bacteriophage T4, 393
repair of mismatch, base composition, *Escherichia coli*, 605
Mutants, short-flagella, *Chlamydomonas reinhardtii*, 685
Mutations
efficiency of translation, mRNA, coliphage λ, 585
gain-of-function, *fem-3*, *Caenorhabditis elegans*, 107
lethal, *cacophony* courtship song, *Drosophilia melanogaster*, 461
Notch, cytogenetics in unstable *X* chromosome, *Drosophilia melanogaster*, 701
p_{RE} promoter, coliphage lambda, 591
recessive lethals, *Dictyostelium discoideum*, 101
somatic, immunoglobulin variable genes, 169
spontaneous, lactate dehydrogenase-A pseudogenes, mouse, 177
ste, temperature-sensitive pseudorevertants, yeast, 627
mutator, induced mutations, chromosome 9, maize, 353
Mutator genes, DNA polymerase, amino-terminal domain, bacteriophage T4, 393

Natural selection, Y-linked polymorphism, 569
Nonsense suppressors, allosuppressors, *Saccharomyces cerevisiae*, 451

Opossum, *X*-linked gene expression, differences, *Gpd* and *Pgk-A* loci, 185

p_{RE}
promoter of coliphage lambda, mutations, 591
promoters, cross-specificities, lambdoid bacteriophages, 597
Palindrome, sequence control of deletion formation, *Escherichia coli*, plasmid pBR322, 41
Paramecium aurelia, frequency of killer trait, determination of factors, 197
P cytotype, hybrid dysgenesis, *Drosophilia melanogaster*, 121
P element
genetic transformation, *Drosophilia melanogaster*, 711
heat shock gene regulatory mutation, *Drosophilia melanogaster*, 333
P-M hybrid dysgenesis cline, *Drosophilia melanogaster*, 737
Phage: *see* Bacteriophage
Pheromones
production, *STE16* gene requirement, yeast, 441
temperature-sensitive pseudorevertants, *ste* mutants, yeast, 627
Phosphoglycerate kinase-A, *Gpd* locus and, *X*-linked gene expression, opossum, 185
Pine, lodgepole, linkage disequilibrium, allozymes, 341
Plasmid
fine structure analysis, cloned genes, yeast transformation, 73
pBR322, control of deletion formation, *Escherichia coli*, 41
Plasmid R68.45, duplicate insertion sequence, mode of replicon fusion, *Escherichia coli*, 619
Polymorphism
Agouti coat color locus, molecular markers, 747
disequilibrium, spatially varied environments, *Drosophilia melanogaster*, 295
gene conversion and, α-globin haplotypes, mouse, 511
isozyme, fluctuating selection, Daphnia, 657
P-element transformation, *Adh* expression, *Drosophilia melanogaster*, 129
Y-linked, natural selection and, 569
Prohead, control of DNA maturation, phage λ, 3
Protease, B gene, isolation and regulation, *Saccharomyces cerevisiae*, 255
Provirus, *Agouti* coat color locus, molecular markers, 747
Pseudococcus affinis, control of meiotic drive, B chromosomes, 499
Pseudomonas aeruginosa, chromosome mapping, high-frequency-of-recombination donors, 611
Pseudorevertants, temperature-sensitive, *ste* mutants, yeast, 627

Radiation, DNA repair, *Saccharomyces cerevisiae*, 83
recABCD, homologous recombination, *Escherichia coli*, phage λ inversions, 11
Recombination
fine structure analysis, cloned genes, yeast transformation, 73
high frequency, chromosome mapping, *Pseudomonas aeruginosa*, 611
homologous, *Escherichia coli*, phage λ inversions, 11
homology requirement, duplicated chromosomal sequences, mammalian cells, 161
"illegitimate," commentary, Naomi Franklin, 581
In(2L)t/α-Gpdh/Adh, *Drosophilia melanogaster*, 141
meiotic, dispersed homologous sequences, *Saccharomyces cerevisiae*, 233
mitotic, *Rex* locus, *Drosophilia melanogaster*, 271
optimal rate, fluctuating environments, 377
uvsW mutations, suppression, bacteriophage T4, 219
Replication, repair, new epistasis group, bacteriophage T4, 405
Restriction fragment length polymorphism, hypervariable Bkm DNA loci, moth, 493
Reversion, sequence control of deletion formation, *Escherichia coli*, plasmid pBR322, 41

Rex locus, responding site, *Drosophilia melanogaster*, 271
RNA, messenger, efficiency of translation, coliphage λ, 585
RNase H, activity, radiation sensitivity, *Escherichia coli*, 33
rnh, RNase H activity, radiation sensitivity, *Escherichia coli*, 33
Rosy locus, diepoxybutane-induced mutations, *Drosophilia melanogaster*, 323

Saccharomyces cerevisiae, 65, 73, 83, 229, 233, 247, 255, 451, 441, 627, 637, 649
Sclerotinia trifoliorum, mating-type switching, filamentous ascomycetes, 215
Selection
  fertility and viability, evolution, 367
  fluctuating, isozyme polymorphisms, Daphnia, 657
  gene flow, rare alleles, *Drosophilia melanogaster*, 313
  natural, disequilibrium, *Drosophilia melanogaster*, 295
Sex, optimal recombination rate, fluctuating environments, 377
Sex determination, gain-of-function mutations, *fem-3*, *Caenorhabditis elegans*, 107
Sex ratio, *Y* chromosome segregation, natural populations, *Drosophilia melanogaster*, 143
Sexual behavior, hyperactivity, reduced longevity, *dunce* females of *Drosophilia melanogaster*, 153
Slime mold, recessive lethals, *Dictyostelium discoideum*, 101
Song, courtship, reproductive behavior, *Drosophilia melanogaster*, 461
Sporulation, *Saccharomyces cerevisiae* zygotes, ordered linear tetrads, 229
SUC2, invertase synthesis, *snf* mutations, yeast, 247
Suppression, *uvsX* and *uvsY* by *uvsW* mutations, bacteriophage T4, 219
Suppressors
  MMS sensitivity, amino acid-requiring mutants, *Aspergillus nidulans*, 671
  trans-activation, Ty transcription, three genes in yeast, 649
Switching, mating-type, filamentous ascomycetes, *Chromocrea spinulosa* and others, 215

Tandem arrays, persistence, satellite and simple-sequence DNAs, 553
Temperature
  allyl alcohol resistance, ADHI functional mutants, *Saccharomyces cerevisiae*, 65
  sensitive pseudorevertants, *ste* mutants, yeast, 627
Tetrads, ordered, sporulation, *Saccharomyces cerevisiae* zygotes, 229
Transposable element, insertion sequences, natural isolates, *Escherichia coli*, 51
Transposeable element, Ty transcription, *trans*-activation, three genes in yeast, 649
Transposition
  duplicate insertion sequence, mode of replicon fusion, *Escherichia coli*, 619
  restriction fragment length polymorphism, hypervariable Bkm DNA loci, moth, 493
Transversions, immunoglobulin variable genes, somatic mutations, mouse, 169

Ultraviolet light, DNA repair, *Saccharomyces cerevisiae*, 83
Ultraviolet radiation, sensitivity, RNase H activity, *Escherichia coli*, 33
uvsW gene, suppression of *uvsX* and *uvsY*, recombinations, bacteriophage T4, 219

Vacuole, protease B gene, isolation and regulation, yeast, 255

Wright model, multinomial Dirichlet model, use of analysis, subdivided genetic populations, 363
Wright, Sewall, physiological genetics, commentary, 1

Yeast
  ADHI functional mutants, allyl alcohol resistance, 65
  cloning of *LEU3*, 91
  DNA repair, two different pathways, 83
  ectopic meiotic conversion, dispersed homologous sequences, 233
  mutants, constitutive for invertase, 247
  ordered tetrads, sporulation of zygotes, 229
  pheromone production, *STE16* gene, 441
  protease B gene, isolation, regulation, 255
  temperature-sensitive pseudorevertants, *ste* mutants, 627
  transformation, cloned genes, fine structure analysis, 73
  Ty transcription, *trans*-activation, three genes, 649
